

From Task Light to Candlelight with Dim-to-Warm LED Strip Lighting

Our dim-to-warm COB LED strip starts as a crisp 3000K at full output and mimics the cozy ambiance of incandescent lighting by automatically warming its color temperature to 1800K when fully dimmed.

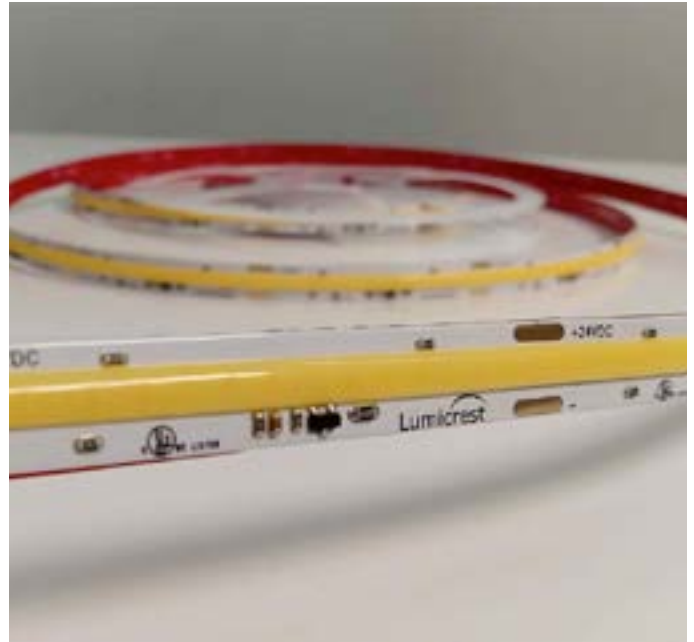

As the light is dimmed, it transitions to a soothing warm glow akin to candlelight, closely resembling the warmth and color of halogen lights. The technology employs a dual colour temperature LED structure and unique circuitry built into the LED strip to make this possible.

We recommend using with an LED aluminum profile + diffuser, such as Lumicrest Workhorse or Anvil models (1/4 inch deep)

Use with compatible Lumicrest dimmable drivers with 24V PWM output (SKUs 1550, 1551, 1552) sold separately.

Comes with 20 cm wires attached to each end.

cUL certified.

Item	Power Consumption	Dimensions (mm)	Dimmable	Colour Temperatures
1685-dtw-pwm	10 watts per meter (3.1 watts/ft)	10 mm wide 5 meters per reel (16.4 feet)	Yes (with dimmable driver that outputs PWM, or with PWM remote or inline dimmer)	3000K at full output 1800K at lowest dimming
Power Input	Power Type	CRI	Cuttable	
24V DC	Constant Voltage	93+ CRI	Cut points every 50 mm (~2 inches)	Suitable for Dry Locations
