

Accent Lighting with a Purpose

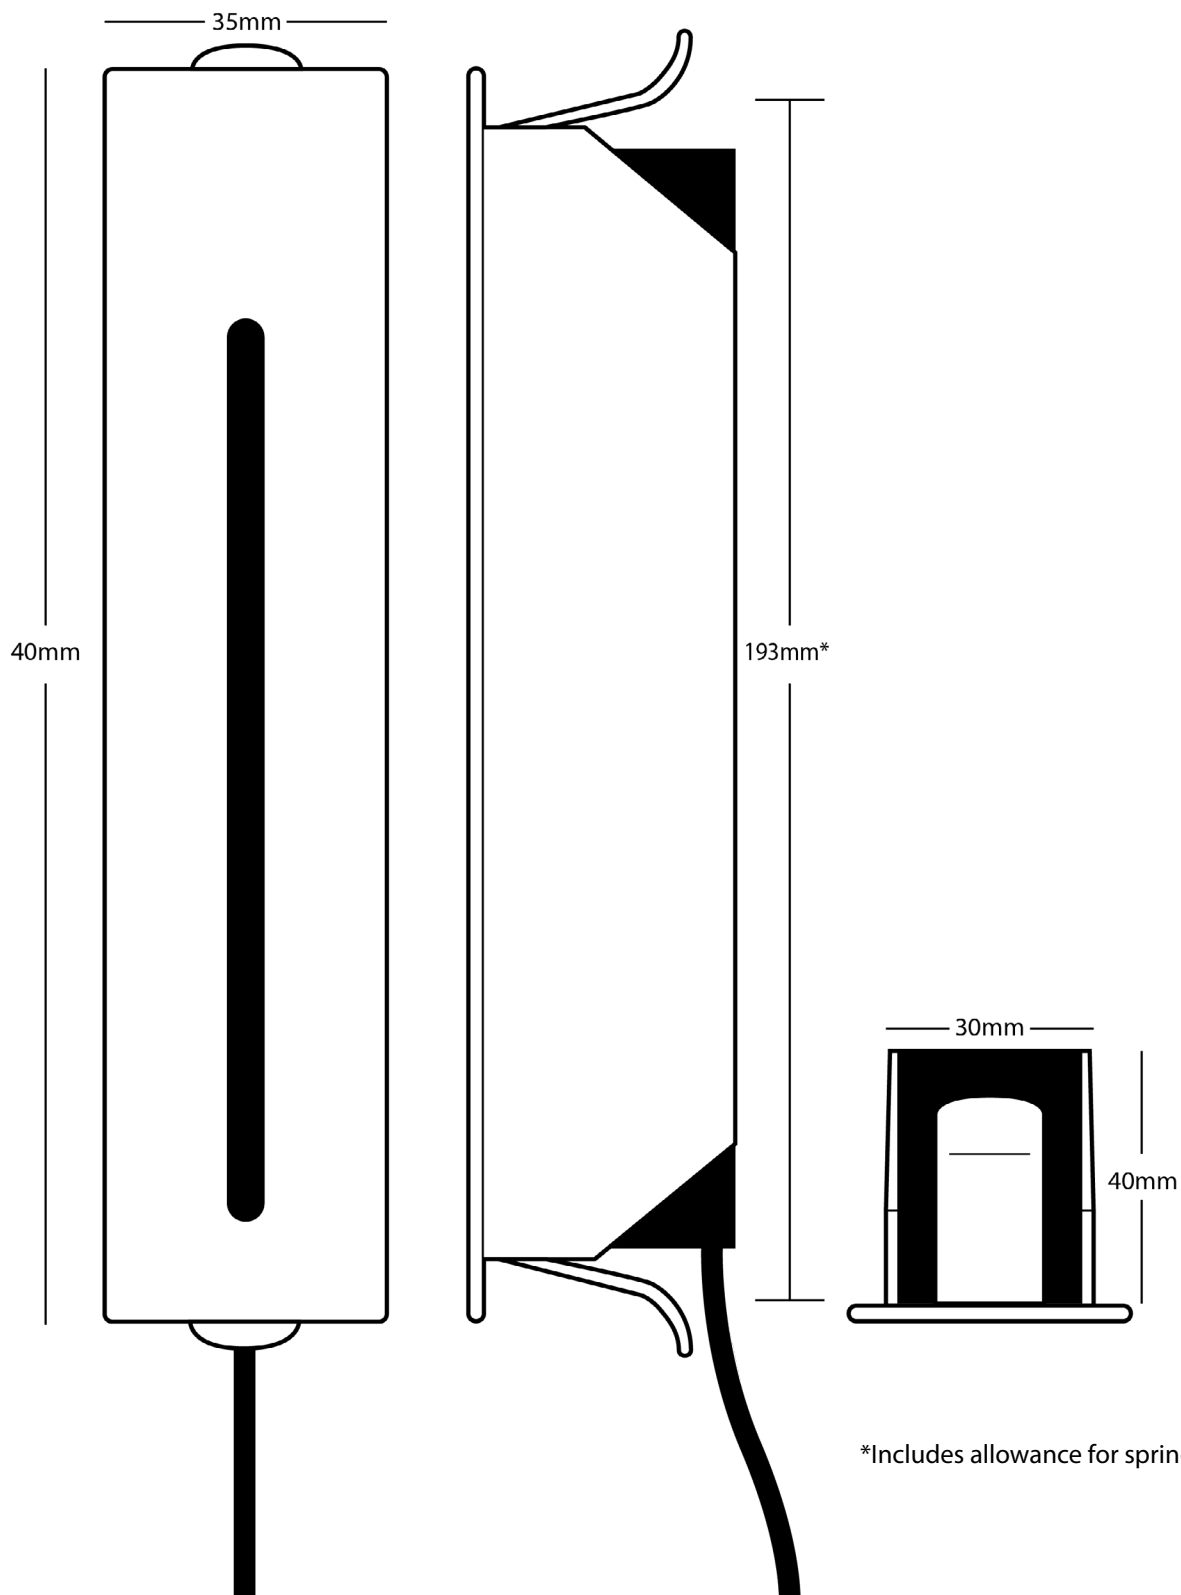

The slit light is unique. With the light embedded in the wall a few inches above floor, a subtle line of light is projected onto the floor or stair.

A series of slit lights installed in a hallway or staircase creates a dramatic eye-catching pattern of light, sufficient to find your way in a darkened area.

The slit light is installed by cutting a rectangular hole in your drywall between the wall studs, and pressing the light into the opening. The integrated spring clips hold the light in place. The light is powered by connecting to a 12V DC LED driver. A single driver of sufficient capacity can be used to operate all of the lights in your hallway or staircase (driver sold separately).

| Model | Dimensions (LxW) | LEDs | Colour Temperature | CRI |
|---------------|---|--------------|--------------------|--------------|
| 662-slit-clw | Body: 193mm x 30mm Faceplate: 200mm x 35mm | 1 | 3000K clean white | 90+ |
| Voltage Input | Power Use | Lumen Output | | Dimming Type |
| 12 V DC | 1 watt | 80 lumens | | PWM |

*Includes allowance for spring clips
